

Project Study: Data Driven Company - Assessment

What is Data Insights GmbH?

We are an innovative IT consultancy company with a focus on Big Data projects, founded in Munich in 2016.

Our customers draw from a wide range of industries i.e. automotive, finance, retail and insurance. Our goal is to develop data-based (product) innovations for our customers via integrating, analysing, processing, and optimising complex data. Our customers are all big names in their respective industries, and our projects tend to be hugely varied in nature. In order to meet the requirements of our customers, our team consists of both Data Engineers and Data Scientists with a variety of specialities. Our goal is to take an idea from development into production, ultimately to assure maximal value for the customer.

On a technological level, our team is highly competent, agile, international, and forms the heart of Data Insights. We guarantee our team members flexibility and personal responsibility. At Data Insights we embody Management 3.0.

What is the scope of the research?

How data-driven is an organisation? How can being data-driven strengthen a company? Based on your assessment regarding these questions, we wish for our consulting offerings to be optimized. The objective is to perform a 'gap analysis' (which areas must be focussed on), as well as the design of a subsequent roadmap enabling better data handling and enrichment.

What you will work on:

- Start with the “Why” – why should organizations be interested in becoming data-driven
- What are key-factors with allow us to identify a truly data-driven organization
- Investigate relevant business and decision processes, and research for benchmark KPIs
- Consider all relevant aspects – from culture, organisation, data processes, technology capabilities, etc.
- What would a “point of arrival” (ultimate goal) for being a data driven organization look like
- Design a detailed questionnaire to assess the gaps

What do we expect from you?

- Student in IT, Engineering, Business, or related field
- Interest in marketing and market research
- Knowledge of research and analysis frameworks/approaches
- Well-structured, proactive, and goal-oriented working style
- Fluent in German and English

Your research should allow us to position Data insights' consulting offering for Data Strategy directly in the market 'sweet-spot', so to speak, by better understanding the need of customers, as well as our competition.

Why you should apply:

- You'll be part of creating something new – beginning with an idea, growing and developing it, and finally seeing it be deployed in the marketplace
- You work with a young team with a start-up feeling, and a cool office in the middle of Munich close to Goetheplatz
- You are in the driver's seat for this study - meaning lots of autonomy while always being able to reach out to the broader team at Data Insights if you get stuck

Sound interesting?

Please send all relevant documents (i.e. CV, motivation letter, academic degrees, and work references) and your earliest possible starting date to recruiting@datainsights.de

If you have any questions, feel free to contact us.
We are looking forward to getting to know you!

Do you know someone who will perfectly fit to our team? Then tell them about us.
